

# Syllabus

## SURV 753 Machine Learning II 2 credits/4 ECTS

Prof. Trent D. Buskirk & Christoph Kern, PhD  
Video lecture by Prof. Trent D. Buskirk & Christoph Kern, PhD

September 24 – November 12, 2021

### Short Course Description

Social scientists and survey researchers are confronted with an increasing number of new data sources such as apps and sensors that often result in (para)data structures that are difficult to handle with traditional modeling methods. At the same time, advances in the field of machine learning (ML) have created an array of flexible methods and tools that can be used to tackle a variety of modeling problems. Against this background, this course discusses advanced ML concepts such as cross validation, class imbalance, Boosting and Stacking as well as key approaches for facilitating model tuning and performing feature selection. In this course we also introduce additional machine learning methods including Support Vector Machines, Extra-Trees and LASSO among others. The course aims to illustrate these concepts, methods and approaches from a social science perspective. Furthermore, the course covers techniques for extracting patterns from unstructured data as well as interpreting and presenting results from machine learning algorithms. Code examples will be provided using the statistical programming language R.

### Course Objectives

By the end of the course, students will...

- will have a profound understanding of advanced (ensemble) prediction methods
- have built up a comprehensive ML toolkit to tackle various learning problems
- know how to (critically) evaluate and interpret results from "black-box" models

### Prerequisites

Topics covered in SURV751: Introduction to Machine Learning and Big Data (ML I), i.e.:

- Conceptual basics of machine learning (training vs. test data, model evaluation basics)
- Decision trees with CART
- Random forests

Familiarity with the statistical programming language R is strongly recommended.

Participants are encouraged to work through one or more R tutorials prior to the first-class meeting. Some resources can be found here:

- <https://rstudio.cloud/learn/primers>
- <http://www.statmethods.net/>
- <https://swirlstats.com/>
- <https://www.rcommander.com>

## Class Structure and Course Concept

This is an online course, using a flipped classroom design. It covers the same material and content as an on-site course but runs differently. In this course, you are responsible for watching video-recorded lectures and reading the required literature for each unit prior to participating in mandatory weekly one-hour online meetings where students have the chance to discuss the materials from a unit with the instructor.

Although this is an online course where students have more freedom in when they engage with the course materials, students are expected to spend the same amount of time overall on all activities in the course – including preparatory activities (readings, studying), in-class-activities (watching videos, participating in online meetings), and follow-up activities (working on assignments and exams) – as in an on-site course. As a rule of thumb, you can expect to spend approximately 3h/week on in-class-activities and 9 hours per week on out-of-class activities (preparing for class, readings, assignments, projects, studying for quizzes and exams). Therefore, the workload in all courses will be approximately 12h/week. This is a 2-credits/4-ECTS course that runs for 8 weeks. Please note that the actual workload will depend on your personal knowledge.

## Mandatory Weekly Online Meetings

*Fridays, 11:00 PM EDT/5:00 PM CEST, starting on September 24*

Meetings will be held online through Zoom. Follow the link to the meeting sessions on the course website on [mannheim.instructure.com](http://mannheim.instructure.com). If video participation via Internet is not possible, arrangements can be made for students to dial in and join the meetings via telephone.

In preparation for the weekly online meetings, students are expected to watch the lecture videos and read the assigned literature before the start of the meeting. In addition, students are encouraged to post questions about the materials covered in the videos and readings of the week in the forum before the meetings (deadline for posting questions is Thursdays, 11:00 PM EDT/5:00 PM CEST).

Students have the opportunity to use the BigBlueButton feature in Canvas to connect with peers outside the scheduled weekly online meetings (e.g., for study groups). Students are

not required to use Canvas Conferences and can of course use other online meeting platforms such as Google Hangouts, Skype or Microsoft Teams.

**Daylight saving time ends in Europe on October 31, 2021 and clocks are turned back 1 hour. Daylight saving time ends in the USA on November 7, 2021. Therefore, look carefully at the times of meetings and deadlines. If in doubt, please consider the Central European Time (e.g. in Frankfurt) is the OFFICIAL time for all meetings and deadlines.**

## Grading

Grading will be based on:

- 4 homework assignments (10% each)
- 8 online quizzes (5% each)
- Participation in discussion during the weekly online meetings (20% of grade)

<i>A+</i>	<i>100 - 97</i>
<i>A</i>	<i>96 - 93</i>
<i>A-</i>	<i>92 - 90</i>
<i>B+</i>	<i>89 - 87</i>
<i>B</i>	<i>86 - 83</i>
<i>B-</i>	<i>82 - 80</i>
<i>Etc.</i>	

The grading scale is a base scale recommended by the MDM. Variations for grading on a scale are at the discretion of the instructor.

Dates of when assignments will be due are indicated in the syllabus. Extensions will be granted sparingly and are at the instructors' discretion.

## Technical Equipment Needs

The learning experience in this course will mainly rely on the online interaction between the students and the instructors during the weekly online meetings. Therefore, we encourage all students in this course to use a web camera and a headset. Decent quality headsets and web cams are available for less than \$20 each. We ask students to refrain from using built-in web cams and speakers on their desktops or laptops. We know from our experience in previous online courses that this will reduce the quality of video and audio transmission and therefore will decrease the overall learning experience for all students in the course. In addition, we suggest that students use a wire connection (LAN), if available, when connecting to the online meetings. Wireless connections (WLAN) are usually less stable and might be dropped.

## Long Course Description

Social scientists and survey researchers are confronted with an increasing number of new data sources such as apps and sensors that often result in (para)data structures that are

difficult to handle with traditional modeling methods. At the same time, advances in the field of machine learning (ML) have created an array of flexible methods and tools that can be used to tackle a variety of modeling problems. Against this background, this course discusses advanced ML concepts such as cross validation, class imbalance, Boosting and Stacking as well as key approaches for facilitating model tuning and performing feature selection. In this course we also introduce additional machine learning methods including Support Vector Machines, Extra-Trees and LASSO among others. The course aims to illustrate these concepts, methods and approaches from a social science perspective. Furthermore, the course covers techniques for extracting patterns from unstructured data as well as interpreting and presenting results from machine learning algorithms. Code examples will be provided using the statistical programming language R.

The course is structured such that each session focuses on specific prediction tasks and presents tools that can be used to tackle modeling problems in this setting. Topics include, e.g., accounting for informative data structures in the context of model training and tuning, dealing with class imbalance in categorical outcomes, building effective prediction models by applying cutting edge ML methods, and performing feature selection in high-dimensional data settings. The presented methods will be motivated from a social and survey science perspective and critically discussed with respect to their advantages and limitations.

Code examples will be provided using the statistical programming language R.

## Readings

### Primary Readings

Hastie, T., Tibshirani, R., and Friedman, J. (2009). *The Elements of Statistical Learning: Data Mining, Inference, and Prediction*. New York, NY: Springer. <https://web.stanford.edu/~hastie/ElemStatLearn/>

James, G., Witten, D., Hastie, T., and Tibshirani, R. (2013). *An Introduction to Statistical Learning*. New York, NY: Springer. <http://faculty.marshall.usc.edu/gareth-james/ISL/>

Boehmke, B., and Greenwell, B. M. (2019). *Hands-On Machine Learning with R*. Boca Raton, FL: CRC Press. <https://bradleyboehmke.github.io/HOML/>

Buskirk, T. D., Kirchner, A., Eck, A. and Signorino, C. (2018). An Introduction to Machine Learning Methods for Survey Researchers. *Survey Practice* 11(1). <https://doi.org/10.29115/SP-2018-0004>

Kern, C., Klausch, T., and Kreuter, F. (2019). Tree-based Machine Learning Methods for Survey Research. *Survey Research Methods* 13(1), 73--93. <https://doi.org/10.18148/srm/2019.v1i1.7395>

### Required and Recommended Readings

List of required and recommended readings for each class are provided below for each specific unit.

## Academic Conduct

Clear definitions of the forms of academic misconduct, including cheating and plagiarism, as well as information about disciplinary sanctions for academic misconduct may be found at

<https://www.president.umd.edu/sites/president.umd.edu/files/documents/policies/III-100A.pdf> (University of Maryland) and

<https://www.uni-mannheim.de/en/research/good-research-practice/> (University of Mannheim).

Knowledge of these rules is the responsibility of the student and ignorance of them does not excuse misconduct. The student is expected to be familiar with these guidelines before submitting any written work or taking any exams in this course. Lack of familiarity with these rules in no way constitutes an excuse for acts of misconduct. Charges of plagiarism and other forms of academic misconduct will be dealt with very seriously and may result in oral or written reprimands, a lower or failing grade on the assignment, a lower or failing grade for the course, suspension, and/or, in some cases, expulsion from the university.

## Accommodations for Students with Disabilities

In order to receive services, students at the University of Maryland must contact the Accessibility & Disability Service (ADS) office to register in person for services. Please call the office to set up an appointment to register with an ADS counselor. Contact the ADS office at 301.314.7682; <https://www.counseling.umd.edu/ads/>.

Students at the University of Mannheim should contact the Commissioner and Counsellor for Disabled Students and Students with Chronic Illnesses at [http://www.uni-mannheim.de/studienbueros/english/counselling/disabled persons and persons with chronic illnesses/](http://www.uni-mannheim.de/studienbueros/english/counselling/disabled%20persons%20and%20persons%20with%20chronic%20illnesses/)

## Course Evaluation

In an effort to improve the learning experience for students in our online courses, students will be invited to participate in an online course evaluation at the end of the course (in addition to the standard university evaluation survey). Participation is entirely voluntary and highly appreciated.

## Sessions

### Week 1: Intro: Bias-variance trade-off, cross-validation (stratified splits, temporal cv) and model tuning (grid and random search)

Video lecture: available Friday, September 17, 2021

Online meeting: Friday, September 24, 2021, 11 AM EDT/5 PM CEST

Online Quiz 1: due Monday, October 4, 2021, 10 AM EDT/4 PM CEST

#### Required Readings:

Ghani, R. and Schierholz, M. (2017). Machine learning. In: Foster, I., Ghani, R., Jarmin, R. S., Kreuter, F., and Lane, J. (Eds.). Big Data and Social Science: A Practical Guide to Methods and Tools. Boca Raton, FL: CRC Press Taylor & Francis Group. <https://coleridge-initiative.github.io/big-data-and-social-science/>

#### Recommended Readings:

Hastie, T., Tibshirani, R., and Friedman, J. (2009). Model Assessment and Selection. In: The Elements of Statistical Learning: Data Mining, Inference, and Prediction. New York, NY: Springer.

### Week 2: Classification: Performance metrics (ROC, PR curves, precision at K) and class imbalance (over- and undersampling, SMOTE)

Video lecture: available Friday, September 24, 2021

Online meeting: Friday, October 1, 2021, 11 AM EDT/5 PM CEST

Online quiz 2: due Monday, October 11, 2021, 10 AM EDT/4 PM CEST

Homework 1: due Monday, October 18, 2021, 10 AM EDT/4 PM CEST

#### Required Readings:

Kuhn, M. and Johnson, K. (2019). Measuring Performance. In: Feature Engineering and Selection: A Practical Approach for Predictive Models. <http://www.feat.engineering/index.html>

#### Recommended Readings:

Kuhn, M. and Johnson, K. (2013). Measuring Performance in Classification Models. In: Applied Predictive Modeling. New York, NY: Springer.

Kuhn, M. and Johnson, K. (2013). Remedies for Severe Class Imbalance. In: Applied Predictive Modeling. New York, NY: Springer.

### Week 3: Ensemble methods I: Bagging and Extra-Trees

Video lecture: available Friday, October 1, 2021

Online meeting: Friday, October 8, 2021, 11 AM EDT/5 PM CEST

Online quiz 3: due Monday, October 18, 2021, 10 AM EDT/4 PM CEST

#### Required Readings:

Hastie, T., Tibshirani, R., and Friedman, J. (2009). *The Elements of Statistical Learning: Data Mining, Inference, and Prediction*. Chapters 7.11 and 8.7. New York, NY: Springer.

#### Recommended Readings:

Breiman, L. (1996). Bagging predictors. *Machine Learning* 24, 2, 123--140.

Geurts, P., Ernst, D., and Wehenkel, L. (2006). Extremely randomized trees. *Machine Learning* 63, 1, 3--42.

### Week 4: Ensemble methods II: Boosting (Adaboost, GBM, XGBoost) and Stacking

Video lecture: available Friday, October 8, 2021

Online meeting: Friday, October 15, 2021, 11 AM EDT/5 PM CEST

Online quiz 4: due Monday, October 25, 2021, 10 AM EDT/4 PM CEST

Homework 2: due Monday, November 1, 2021, 10 AM EDT/4 PM CEST

#### Required Readings:

Hastie, T., Tibshirani, R., and Friedman, J. (2009). *The Elements of Statistical Learning: Data Mining, Inference, and Prediction*. Chapters 10.1, 10.9, 10.10. New York, NY: Springer.

#### Recommended Readings:

Mayr A., Binder H., Gefeller O., Schmid M. (2014). The evolution of boosting algorithms: from machine learning to statistical modelling. *Methods of Information in Medicine* 53(6), 419--427.

Ridgeway, G. (2018). *Generalized Boosted Models: A guide to the gbm package*.

### Week 5: Variable selection: Lasso, elastic net and fuzzy/ recursive random forests

Video lecture: available Friday, October 15, 2021

Online meeting: Friday, October 22, 2021, 11 AM EDT/5 PM CEST

Online quiz 5: due Monday, November 1, 2021, 10 AM EDT/4 PM CEST

**Required Readings:**

Efron, B. and Hastie, T. (2016). Sparse Modeling and the Lasso. In: Computer Age Statistical Inference. Algorithms, Evidence, and Data Science. New York, NY: Cambridge University Press.

**Recommended Readings:**

Kuhn, M. and Johnson, K. (2013). An Introduction to Feature Selection. In: Applied Predictive Modeling. New York, NY: Springer.

Kuhn, M. and Johnson, K. (2019). Feature Selection Overview. In: Feature Engineering and Selection: A Practical Approach for Predictive Models. <http://www.featurengineering/index.html>

**Week 6: Support Vector Machines**

Video lecture: available Friday, October 22, 2021

Online meeting: Friday, October 29, 2021, 11 AM EDT/5 PM CEST

Online quiz 6: due Monday, November 8, 2021, 10 AM EDT/4 PM CEST

Homework 3: due Monday, November 15, 2021, 10 AM EDT/4 PM CEST

**Required Readings:**

Kirchner, A., and Signorino, C. S. (2018). Using Support Vector Machines for Survey Research. *Survey Practice* 11(1). <https://doi.org/10.29115/SP-2018-0001>

**Recommended Readings:**

Chang, C. C., and Lim, C. J. (2016). LIBSVM. A Library for Support Vector Machines. <https://www.csie.ntu.edu.tw/~cjlin/libsvm/>

**Week 7: Advanced unsupervised learning: Hierarchical clustering and LDA**

Video lecture: available Friday, October 29, 2021

Online meeting: Friday, November 5, 2021, 11 AM EDT/5 PM CEST

Online quiz 7: due Monday, November 15, 2021, 10 AM EDT/4 PM CEST

**Required Readings:**

Kassambar, A. (2017). Practical Guide to Cluster Analysis in R: Unsupervised Machine Learning, Chapters 7--9. Free Online View and PDF download available at: [https://kupdf.net/download/practical-guide-to-cluster-analysis-in-r-unsupervised-machine-learning\\_5a65e055e2b6f556501cc785\\_pdf](https://kupdf.net/download/practical-guide-to-cluster-analysis-in-r-unsupervised-machine-learning_5a65e055e2b6f556501cc785_pdf)

**Recommended Readings:**

Boedeker, P., and Kearns, N. T. (2019). Linear Discriminant Analysis for Prediction of Group Membership: A User-Friendly Primer. *Advances in Methods and Practices in Psychological Science* 2(3), 250--263.

## Week 8: Interpreting (Variable Importance, PDP, ...) and reporting ML results

Video lecture: available Friday, November 5, 2021

Online meeting: Friday, November 12, 2021, 11 AM EDT/5 PM CEST

Online quiz 8: due Monday, November 22, 2021, 10 AM EDT/4 PM CEST

Homework 4: due Monday, November 29, 2021, 10 AM EDT/4 PM CEST

### Required Readings:

Molnar, C. (2019). Interpretable Machine Learning. A Guide for Making Black Box Models Explainable, Chapters 5.1--5.7. <https://christophm.github.io/interpretable-ml-book/>

### Recommended Readings:
